of six greenhouse gases by 12.5 per cent below base year levels over the 2008-2012 period, and also the domestic goal of reducing carbon dioxide emissions by 20 per cent below 1990 levels by 2010.

Projections indicate that CO₂ reduction

by 2010 will only be some 10.6 per cent below the 1990 level.

Sections on the UK emission inventory and projections, the strategy to reduce emissions, and the energy supply sector, are followed by chapters covering particular

This book proposes a framework for describing languages through the description of relationships among lexicon, morphology, syntax, and phonology. The

framework is based on the notion of formal coding means; the principle of functional transparency; the notion of functional domains; and the notion of systems interaction in the coding of functional domains. The study is based on original

analyses of cross-linguistic data. The fundamental finding of the study is that different languages may code different functional domains, which must be discovered by analyzing the formal means available in each language. The first

part of the book
proposes a
methodology for
discovering
functional domains
and the second
part describes the
properties of
various functional
