Garnering a vast amount of attention from young people and parents, and from book buyers across the country, *Smashed* became a media sensation and a New York Times bestseller. Eye-opening and utterly gripping, Koren Zailckas's story is that of thousands of girls like her who are not alcoholics—yet—but who routinely use booze as a shortcut to courage and a stand-in for good judgment. With one stiff sip of Southern Comfort at the age of fourteen, Zailckas is initiated into the world of drinking. From then on, she will drink faithfully, fanatically. In high school, her experimentation will lead to a stomach pumping. In college, her excess will give way to a pattern of self-poisoning that will grow more destructive each year. At age twenty-two, Zailckas will wake up in an unfamiliar apartment in New York City, elbow her friend who is passed out next to her, and ask, "Where are we?" *Smashed* is a sober look at how she got there and, after years of blackouts and smashups, what it took for her to realize she had to

stop drinking. Smashed is an astonishing literary debut destined to become a classic.

This book presents an early treatment model for toddlers. It describes the early life span development, trajectory, and future potential of toddlers and how it may be powerfully influenced by the protection and guidance of caregivers to meet toddlers' physical and mental health needs. It offers an in-depth guide to Parent-Child Interaction Therapy with Toddlers (PCIT-T), an evidence-based program for addressing and preventing behavior problems affecting young children's development. The book details the innovative intervention design and how it guides clinicians in providing treatment for 12-month old to 24-month old toddlers with disruptive behaviors in addition to being used as a prevention model for caregivers experiencing stress of child rearing. PCIT-T focuses on core areas of social and emotional development, including behavior management and language skills, and can be used in dealing with difficulties as diverse as tantrums, language issues, autistic behaviors, and separation anxiety. Play therapy and compliance training in child-directed as well as parent-directed sessions are also examined. Initial chapters provide an overview of attachment and behavioral theory components that are foundational to the treatment model. Subsequent chapters provide a session-by-session guide and clinical manual for implementation of PCIT-T as well as the clinician tools needed to monitor treatment integrity and fidelity to the model. Topics featured in this book include: Core elements and treatment goals of PCIT-T A range of behavioral assessments used in PCIT-T. Instructions for room set-up, toy selection, and special considerations when providing PCIT-T treatment. Preparation guides for the pretreatment interview, assessment sessions, and weekly coaching sessions. The importance of child-directed interaction toddler (CDI-T) and parent-directed interaction toddler (PDI-T) in teaching children the necessary skills to regulate their emotions and develop self-control. Parent-Child Interaction Therapy with Toddlers is a must-have resource for clinicians and related professionals, researchers and professors, and graduate students in the fields of clinical child and school psychology, social work, pediatrics, infancy and early childhood development, child and adolescent psychiatry, primary care medicine, and related disciplines.

This exciting new text teaches the foundations of electric circuits and develops a thinking style and a problem-solving methodology that is based on physical insight. Designed for the first course or sequence in circuits in electrical engineering, the approach imparts not only an appreciation for the elegance of the mathematics of circuit theory, but a genuine "feel" for a circuit's physical operation. This will benefit students not only in the rest of the curriculum, but in being able to cope with the rapidly changing technology they will face on-the-job. The text covers all the traditional topics in a way that holds students' interest. The presentation is only as mathematically rigorous as is needed, and theory is always related to real-life situations. Franco introduces ideal transformers and amplifiers early on to stimulate student interest by giving a taste of actual engineering practice. This is followed by extensive coverage of the operational amplifier to provide a practical illustration of abstract but fundamental concepts such as impedance transformation and root location control--always with a vigilant eye on the underlying physical basis. SPICE is referred to throughout the text as a means for checking the results of hand calculations, and in separate end-of-chapter sections, which introduce the most important SPICE features at the specific points in the presentation at which students will find them most useful. Over 350 worked examples, 400-plus exercises, and 1000 end-of-chapter problems help students develop an engineering approach to problem solving based on conceptual understanding and physical intuition rather than on rote procedures.

Institutional care for seniors offers a cultural repository for fears and hopes about an aging population. Although enormous changes have occurred in how institutional care is structured, the legacies of the poorhouse still persist, creating panicked views of the nursing home as a dreaded fate. The paradoxical nature of a space meant to be both hospital and home offers up critical tensions for examination by age studies scholars. The essays in this book challenge stereotypes of institutional care for older adults, illustrate the changes that have occurred over time, and illuminate the continuities in the stories we tell about nursing homes.

Musical Worlds in Yogyakarta addresses themes of social identity and power, counterpoising Pierre Bourdieu's theories on class, gender and nation with the author's alternative perspectives of inter-group social capital, physicality and grounded cosmopolitanism. The author argues that Yogyakarta is exemplary of how everyday people make use of music to negotiate issues of power and at the same time promote peace and intergroup appreciation in culturally diverse inner-city settings.
