Sails of the Herring Fleet traces esteemed director and theorist Herbert Blau's encounters with the work of Samuel Beckett. Blau directed Beckett's plays when they were still virtually unknown, and for more than four decades has remained one of the leading interpreters of his work. In addition to now-classic essays, the collection includes early program notes and two remarkable interviews -- one from Blau's experience directing *Waiting for Godot* at San Quentin prison, and one from his last visit with Beckett, just before the playwright's death. Herbert Blau is Byron W. and Alice L. Lockwood Professor of the Humanities, University of Washington.

"Fictional graphic novel telling a magical realist story set in the world of the black market for deceased brides in China"--

"Sapphire's birthday is nearly here and her friends are planning a magical party. But Troy has been behaving strangely-could he be keeping a secret from the others" (publisher)?

This book covers modern analog components, their characteristics, and interactions with process parameters. It serves as a comprehensive guide, addressing both the theoretical and practical aspects of modern silicon devices and the relationship between their electrical properties and processing conditions. Based on the authors' extensive experience in the development of analog devices, this book is intended for engineers and scientists in semiconductor research, development and manufacturing. The problems at the end of each chapter and the numerous charts, figures and tables also make it appropriate for use as a text in graduate and advanced undergraduate courses in electrical engineering and materials science. Enables engineers to understand analog device physics, and discusses important relations between process integration, device design, component characteristics, and reliability; Describes in step-by-step fashion the components that are used in analog designs, the particular characteristics of analog components, while comparing them to digital applications; Explains the second-order effects in analog devices, and trade-offs between these effects when designing components and developing an integrated process for their manufacturing.
