With a strong focus on problem solving and community-police partnerships, Miller, Hess, and Orthmann's comprehensive text provides a practical, up-to-date guide to effective community policing. After introducing the history and philosophy of the movement that has profoundly shaped modern police operations, the authors emphasize practical strategies and essential skills to help readers apply effective, real-world problem solving within their communities. In light of high-profile deadly force incidents that have strained the relationships between the community and the police, this edition taps into the recommendations in the Final Report of the President's Task Force on 21st Century Policing and its call for a renewed emphasis on community policing to strengthen public trust and build police legitimacy. And the MindTap that accompanies the text helps students master techniques and key concepts while engaging them with career-based decision-making scenarios, visual summaries, and more. Engineering & Computer Graphics Workbook Using SOLIDWORKS 2019 is an exercise-based workbook that uses step-by-step tutorials to cover the fundamentals of SOLIDWORKS 2019. The intended audience is college undergraduate engineering majors, but it could also be used in pre-college introductory engineering courses or by self learners. The text follows an educational paradigm that was researched and developed by the authors over many years. The paradigm is based on the concurrent engineering approach to engineering design in which the 3-D solid model data serves as the central hub for all aspects of the design process. The workbook systematically instructs the students to develop 3-D models using the rich tools afforded in SOLIDWORKS. The exercises then proceed to instruct the students on applications of the solid model to design analysis using finite elements, to assembly modeling and checking, to kinematic simulation, to rapid prototyping, and finally to projecting an engineering drawing. The workbook is ideally suited for courses in which a reverse engineering design project is assigned. This book contains clear and easy to understand instructions that enable the students to robustly learn the main features of SOLIDWORKS, with little or no instructor input.

The opening chapter focuses on the objects designed by Clara Driscoll - from the early and experimental. Deep Sea lamp to the popular Wisteria model - and illuminates steps in the design and manufacturing process previously unknown to scholars. The second chapter examines Clara's role as manager of the Women's Class Cutting Department, discusses the role of women within the larger context of the firm, and describes the tension between the men's and women's departments. The final chapter explores Clara's experience as a single working woman in New York City during the 1890s and early 1900s. The volume also features brief biographies of the 63 women designers, selectors, and glass cutters associated with Tiffany Studios.
